APEWEH REXFORD AWAREGYA

Software Engineer · Full Stack, DevOps & AI

Accra, Ghana | awaregyarexford0@gmail.com
linkedin.com/in/rexford-apeweh | github.com/ApewehRexford | Portfolio URL

SUMMARY

Computer Science student at the University of Ghana who ships complete, working software. Led DevOps and release for a 7-person team delivering an asset management system to a client; founded Xylovt and delivered an offline desktop app to its first customer; led a Top 25 team at GreenRes Hackathon 2026. Works across React/TypeScript, Node and Python back ends, SQL databases, CI/CD, and desktop packaging, using AI coding tools daily to build and learn faster.

EXPERIENCE

Founder · Xylovt — Jan 2025 — Present

- Founded a software company building web, mobile, and data systems for businesses.
- Delivered Fordklyn Apartments TMS (Electron, React, TypeScript, SQLite, Prisma): rebuilt a self-hosted web app as an offline Windows desktop app, removing the server, database install, and network setup the non-technical owners had to maintain.
- Designed a typed IPC boundary with no HTTP server, integer-cent money handling, renewal dates derived from payments, and automatic daily backups with 14-day retention and one-click restore.

DevOps & Release Lead, Full-Stack · Kemet Labs (UG) for Multisoft Solutions Ltd — Jun — Aug 2026

- Built the repository engineering baseline: GitHub Actions CI running lint and tests on every push, a Makefile build contract, and a protected main branch with required review. Primary PR reviewer (15+ merges).
- Packaged the React/TypeScript client with Tauri into a ~3 MB Windows installer, with the server address configured at first launch so one build runs on every workstation.
- Normalised department data in PostgreSQL/Prisma using case-insensitive matching and a unique-constraint retry for concurrent creates, and reworked 20+ frontend components.
- Wrote the installation guide and a build record of Windows packaging issues and fixes. Project handed off with 253 automated tests (NestJS, React).

Chief Operating Officer · SwapGPA Technologies Limited, Accra — May 2026 — Present

- Promoted from Software Engineer (Feb 2026) to Head of Sales & Growth (Mar 2026) to COO; lead day-to-day company operations.

Software Engineering & Data Science Intern · Afrifanom Limited, Accra — Apr — May 2026

- Contributed across the product for Mijo, a ride-hailing and logistics platform for African markets with flat-rate driver subscriptions and digital address integration.

Data Science Fellow · Ghana-India Kofi Annan Centre of Excellence in ICT (GI-KACE) — Oct — Dec 2024

- Developed and implemented machine learning models in Python for data-driven problems.

PROJECTS

EcoQuest Africa — Team Lead & Lead Software Engineer · GreenRes Hackathon 2026, Top 25 — Jul — Aug 2026

- Led a team building a gamified climate-action app for African children in TypeScript, with real-world quests and support for English, French, Kiswahili, and Hausa. Live: ecoquest-neon.vercel.app

TryOn · Computer vision · MediaPipe, Python, JavaScript

- Browser-based virtual try-on controlled entirely by hand and face gestures: pinch to move and resize, mouth-open to switch styles, peace sign to trigger a selfie.

CPU-SIM · Systems · HTML, JavaScript

- Interactive Von Neumann simulator with a custom 16-instruction ISA, built-in assembler, breakpoints, and animated fetch-decode-execute visualisation.

HONORS

- **Best in Engineering**, Pan-African Robotics Competition 2024, Senegal: first team from Ghana to win the award (Python, VEX V5).
- **Winner**, Ghana Robotics Competition 2023, the competition's first edition (MicroPython, Raspberry Pi).

EDUCATION

BSc Computer Science · University of Ghana — 2025 — 2028 (expected)

Certificates: Professional Certificate in Data Science, The University of Tokyo (2026) · Object-Oriented Programming in Java, Educative (2026) · Learn Python, Educative(2026)

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL
Frontend & desktop: React, Vite, Tailwind CSS, Electron, Tauri
Backend & data: NestJS, Node.js/Express, Flask, PostgreSQL, SQLite, Prisma
DevOps & tools: Git, GitHub Actions, Make, electron-builder, Vercel, Figma
AI / ML: Claude Code, OpenAI API, MediaPipe, scikit-learn, pandas
