APEWEH REXFORD AWAREGYA

AI & Software Engineer | Python, Machine Learning, Full Stack
Accra, Ghana | awaregyarexford0@gmail.com | linkedin.com/in/rexford-apeweh | github.com/ApewehRexford | Portfolio URL

SUMMARY

Computer Science student at the University of Ghana who builds and ships complete software. Developed and implemented machine learning models in Python, and delivered full-stack, desktop, and CI/CD work to live users. Founder of a software company and COO of an early-stage startup.

EXPERIENCE

Founder, Xylovt | Jan 2025 – Present

- Founded a software company building web, mobile, and data systems for businesses.
- Delivered an offline Windows application to a client (Electron, React, TypeScript, SQLite, Prisma), replacing a self-hosted web app that non-technical owners had to maintain.
- Designed a typed IPC boundary with no HTTP server, integer-cent money handling, renewal dates derived from payments, and automatic daily backups with 14-day retention and one-click restore.

DevOps & Release Lead, Full-Stack | Kemet Labs (UG) for Multisoft Solutions Ltd | Jun – Aug 2026

- Built the repository engineering baseline: GitHub Actions CI running lint and tests on every push, a Makefile build contract, and a protected main branch with required review. Primary PR reviewer (15+ merges).
- Packaged the React/TypeScript client with Tauri into a ~3 MB Windows installer, with the server address configured at first launch so one build runs on every workstation.
- Normalised department data in PostgreSQL/Prisma using case-insensitive matching and a unique-constraint retry for concurrent creates; reworked 20+ frontend components.
- Wrote the installation guide and a build record of Windows packaging issues and fixes. Project handed off with 253 automated tests (NestJS, React).

Chief Operating Officer, SwapGPA Technologies Limited (early-stage startup) | Accra | May 2026 – Present

- Promoted from Software Engineer (Feb 2026) to Head of Sales & Growth (Mar 2026) to COO, leading day-to-day company operations.

Software Engineering & Data Science Intern, Afrifanom Limited | Accra | Apr – May 2026

- Contributed across the product for Mijo, a ride-hailing and logistics platform for African markets with flat-rate driver subscriptions and digital address integration.

Data Science Fellow, Ghana-India Kofi Annan Centre of Excellence in ICT (GI-KACE) | Oct – Dec 2024

- Developed and implemented machine learning models in Python for data-driven problems.

PROJECTS

EcoQuest Africa, Team Lead & Lead Software Engineer |Top 25 | GreenRes Hackathon 2026, Top 25 | Jul – Aug 2026

- Led a team building a gamified climate-action app for African children in TypeScript, with real-world quests and support for English, French, Kiswahili, and Hausa. Live: ecoquest-neon.vercel.app

Kasapon, Product & Full-Stack Software Engineer | Tɛkyerɛma Pa Hackathon 2026| 3rd | Jul – Oct 2026

- Built a voice-first assistant for mobile and web where users speak naturally to check balances and send money, with no menus or keypad steps, and accessibility designed in from the start.
- Designed an IVR payment flow with a voice-based PIN confirmation method (Kasapon Shield) that avoids speaking the PIN aloud by using a changing letter-to-digit mapping.
- Built the mobile app in React and TypeScript, including the voice interaction flow.

TryOn, Computer Vision | MediaPipe, Python, JavaScript

- Browser-based virtual try-on controlled entirely by hand and face gestures: pinch to move and resize, mouth-open to switch styles, peace sign to trigger a selfie.

CPU-SIM, Systems | HTML, JavaScript

- Interactive Von Neumann simulator with a custom 16-instruction ISA, built-in assembler, breakpoints, and animated fetch-decode-execute visualisation.

HONORS

- Best in Engineering, Pan-African Robotics Competition 2024, Senegal: first team from Ghana to win the award (Python, VEX V5).
- Winner, Ghana Robotics Competition 2023, the competition's first edition (MicroPython, Raspberry Pi).

EDUCATION

BSc Computer Science, University of Ghana | 2025 – 2028 (expected)

Professional Certificate in Data Science, The University of Tokyo (2026) · Object-Oriented Programming in Java, Educative (2026) · Learn Python, Educative (2026)

SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL
AI / ML: scikit-learn, pandas, MediaPipe, OpenAI API, Claude Code
Frontend & Desktop: React, Vite, Tailwind CSS, Electron, Tauri
Backend & Data: NestJS, Node.js, Express, Flask, PostgreSQL, SQLite, Prisma
DevOps & Tools: Git, GitHub Actions, Make, electron-builder, Vercel, Figma
